The 4th IEEE International Conference on Architecture, Construction, Environment, and Hydraulics was held at CYUT from 10 Dec to 12 Dec. Keynote speakers Professor Mirosław J. Skibniewski of the University of Maryland and Professor Takaji Okuda of CYUT shared topics related to Architectural Design and Engineering, Construction Engineering and Management, Environmental Engineering and Geographic Information Systems, and Hydraulic Engineering.

The College of Science and Engineering of CYUT, one of the co-hosts, revealed that the conference received more than 50 papers from scholars from six countries. Architecture, construction, environment, and hydraulics recently faced smart transformations due to advances in computer networking, big data, and artificial intelligence. The conference brings together engineers and scholars across disciplines for knowledge exchange and explores new ideas and challenges related to construction engineering, management, technology, and the environment.
